

Extensive use of XML (Extensible Markup Language) for transporting data with the help of SOAP (Simple Object Access Protocol) and Web Services.

Unification of EDI and XML means making application implementation easier, allowing for quicker document-centric tools such as search engines and Internet "push" products to supplement database mechanisms.

Customisation of data retrieval formats

Usage of latest Java Scripts enables a leaner and smart client for the web users.

Server management has been tied with "Microsoft Gold Certified Partners" where stable hosting environments prevail with minimum down time for maintenance, disaster recovery arrangements & high level of security for Data.

Microsoft advantage: Training and re-training of the idex24 team enables them to be updated with the latest technology
